

CyProtect Key Administration

Key management with 512 Bit PMC

Secure ♦ Simple ♦ Fast

Secure by integration of modern crypto hardware

Simple by intuitive and thin user interface

Fast without losing security

Highlights

- ✓ Simple installation and handling
- ✓ Grouping of keys to map company's hierarchy
- ✓ Integration of Rainbow iKey
- ✓ Key transfer via file (encrypted) oder iKey (PIN protected)

You don't want to force end users to remember lots of passwords? You need a central key management for keys in your company?

In cooperation with the encryption products of Cyprotect AG you benefit from the advantages of **CyProtect Key Administration**.

With **CyProtect Key Administration** you can easily create keys and put them on a Rainbow iKey or deliver them as files.

These keys can be used to encrypt files or logical drives.

By sharing keys in a precisely defined way you can realize hierachical access to protected data.

You have saved some keys for an end user on an iKey and this iKey is lost or damaged? No problem: With **CyProtect Key Administration** you can easily restore all desired keys.

Requirements

- x CPU: Intel x86 oder kompatibel
- x System: Windows 98/ME/NT/2000/XP/2003
